Join us for an interactive
training using the Tribal
Adaptation Menu

Reflecting Indigenous Perspectives in Climate Adaptation

Traditional and indigenous knowledges and perspectives have not often been recognized in climate adaptation planning efforts focused on natural and cultural resources. This training will use the new Tribal Adaptation Menu along with the Northern Institute of Applied Climate Science Adaptation Workbook to integrate tribal and traditional values with climate adaptation planning processes. Feedback and discussion on the menu will be welcomed and encouraged.

Is this training for me?

This training is designed for Tribal natural resource managers, along with partner organizations and key collaborators.

We encourage individuals and small teams to participate and to bring a project that is relevant to you, such as restoration of a wetland. Teams can be helpful for brainstorming a variety of goals and actions related to woods, water, wildlife, and community.

Workshop Goals

- Identify priorities and set goals for tribal natural resources management.
- Evaluate challenges and opportunities to meeting select goals under climate change.
- Develop actions to help adapt natural resources to changing conditions.
- Develop plans to engage tribal community members in adaptation decisions.
- Learn about tools and approaches that can serve as a foundation for more detailed local and regional work.

Important Dates

- January 4th – Registrations due!
- January 9th, 1-2:30pm central – Attend a webinar to learn about how to prepare for the workshop.
- January 23-24th - Workshop
