In-person Workshop:
May 13-14, 2024

Pinyon and juniper adaptation and management

There is an increasing need to consider the effects of climate change on ecosystems and identify adaptive management actions that respond to these changes. This workshop will support participants that manage pinyon and juniper woodlands on the Colorado Plateau in determining which climate impacts are of greatest concern to them and identify management opportunities for adapting to change.

Workshop participants will:

- Review regional and local effects of climate change on pinyon-juniper woodlands
- Identify challenges and opportunities for land managers related to pinyon and juniper woodland management
- Explore resources and tools that can be used to integrate climate change into pinyon and juniper management
- Play an instrumental role in developing actionable steps to adapt pinyon and juniper management approaches to changing climate regimes
- Network with colleagues from across the region who are dealing with similar issues

Details

In-Person Workshop:

Monday, May 13: 9-5 MT
Tuesday, May 14: 9-5 MT

Location:

Flagstaff, AZ
DoubleTree by Hilton Flagstaff

Interested?

Please contact Mandy Slate (slate.41@osu.edu) with your interest in attending the workshop by Friday, **March 1.**
