

FOREST ADAPTATION LISTENING SESSIONS

SAVE THE DATE!

Natural resource professionals need scientifically credible, relevant, and timely information on climate change, its effects on ecosystems, and potential management options in order to effectively respond to climate change. The Northern Institute of Applied Climate Science and Forest Stewards Guild are seeking input on key areas of uncertainty where managers have questions so that we can help promote science to address managers' needs.

Participate in a Listening Session

We will be conducting a series of in-person listening sessions to explore science needs in greater detail. We invite forest managers and other natural resource professionals to join us for the conversation, where we will review our current understanding of the science and identify remaining questions.

Can't attend? Share your thoughts online.

Your input will help us to understand your important questions and develop resources to help our community of practice adapt forests to the changing climate. Please take a few minutes to answer seven short questions at www.tinyurl.com/ForestClimateAdaptation.

November 16: Northampton, MA
9:00 a.m.-12:00 p.m.

December 6: Orono, ME
1:00-4:00 p.m.

December 14: Burlington, VT
FEMC Conference session

December 19: Smithfield, RI
9:00 a.m.-12:00 p.m.
